

Grid Frame Installation Instructions - UC120 Bracket

UC120 PARTS KIT

QTY	DESCRIPTION
3	UC120 Base
12	UZSCREWW
12	UZWNUTA
3	UZSCREWU
1	UC120TC
1 /Order	JX INSTRUCTION

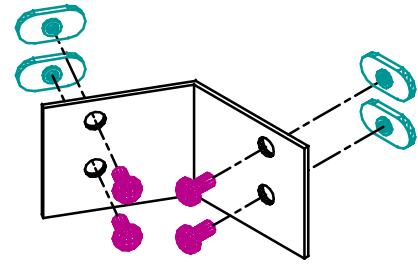

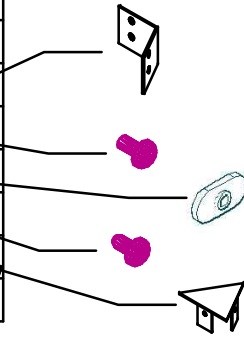

Figure A

Bits Required:
Phillips & #25 Torqs

The easiest way to install these UC120 brackets is by loosely attaching the screw UZSCREWW through the bracket and into nut UZWNUTA so that the end of the screw is no more than flush with the back of the nut. Do this with all 4 screws as shown in Figure A.

Install the UZWNUTA's into the two slots in the bottom rail of the Spine wall Grid frame placing UC120 so that the bend is aligned with Mid Cap and secure in place. Align the other weld nuts to be able to slide into the adjoining bottom rail of the 120° Fin Wall Grid Frames. Tighten screws to hold in place as shown in Figure B.

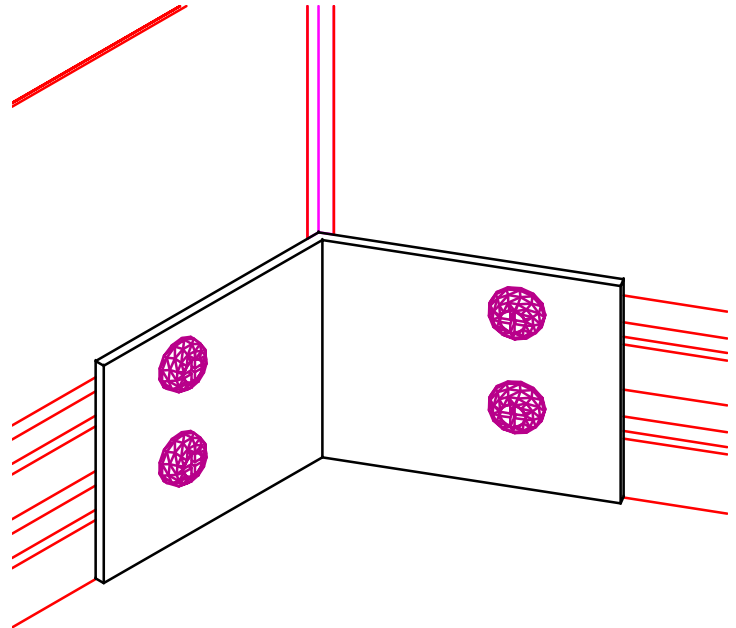

Figure B

Remove screws in Top caps of Grid Frames and set Top caps aside which will later be installed after electrical and tiles are installed in all frames. Next place UC120TC in position as shown in Figure C. Fasten with UZSCREWU through hole at top of Mid cap of frame into the hole in one the tab of the UC120TC. Flush cap to top of the Mid cap frame and tighten screw.
