

Lyft

LOCATION

Nashville, Tennessee

DESIGN FIRM

Two Furnishings, San Francisco

The staff at Lyft continues to grow rapidly across the US. The project team partnered with Enwork Studio to create workspace solutions that 1) integrated power & data really well, and 2) incorporated some of the hottest materials in the market today. The result became a custom 24" tall Grid Raceway to deliver power throughout the space. The Grid Raceway was painted in carbon metallic to simulate raw steel for an urban industrial aesthetic. Tables feature tops with low sheen hickory plywood veneer and exposed edges, paired with a three-stage programmable electric height-adjustable base. These products work together to create spaces that are relevant within today's finish palette while also enabling a variety of healthy work postures with the height-adjustable base.

PRODUCT MIX

- Custom multi circuit Grid
- EC height adjustable base with programmable switch (3 stage)
- Impression X base tables (round statement ply tops)
