

Ambition™ Beams & Supports

Power/Data Solution for Freestanding Workstations

Ambition Beams route power and cables fully concealed to provide users convenient access in freestanding workstation applications. Beams float in space, spanning up to 24 feet with only end supports. Fewer feet frees up floor space for storage components while reducing visual clutter.

To meet a variety of application and aesthetic preferences, Ambition Beam end supports can be any combination of Ambition Credenzas, End Panels, or legs. The customizable Credenza platform includes standard recycling/trash/printer and buffet styles. End panels are available in laminate or wrapped in acoustic material to help manage noise in the workspace.

Ambition provides broad opportunities for Day 2 reconfiguration needs. From a planning perspective, freestanding furniture is inherently flexible. Ambition Beams, Credenzas, and desks can be easily moved or reconfigured and reused.

Include Beam topper screens for improved acoustics, an additional pop of color, or additional workstation modesty.

- Fully concealed power and data cable routing
- Includes two 15amp duplex receptacles and 1 data cover (with 2 data openings) per user
- Choose single-sided or double-sided power as needed for your application
- Available 5, 6, 10, 12, 15, 18, 20, and 24 feet long with only two end supports
- 30" H to top of Beam with optional 12" topper screen for additional privacy/modesty
